
Density of T under H₁: $f_T(t \mid \theta_1)$
β = P(Type II error) = P(Accept H₀ | H₀ false)
Density of T under H₀: $f_T(t \mid \theta_0)$
1 – β (power)
P(Reject H₀ | H₀ false)
1 – α
P(Accept H₀ | H₀ true)
Density of T
Acceptance region (Accept H₀)
Critical region (Reject H₀)
Critical value c
Test statistic value t
α = P(Type I error) = P(Reject H₀ | H₀ true)
